

AVaiL Mobile Resource Management

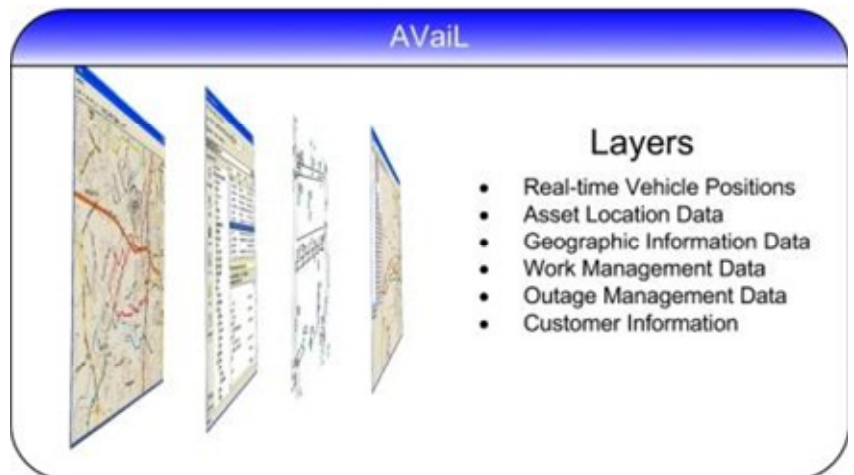

Utility Associates delivers comprehensive mobile resource management services through *AVaiL* and advanced mobile communications through *OnComm*. These products deliver mobile operations efficiency and safety benefits for day-to-day field operations as well as comprehensive mobile asset management.

AVaiL delivers a highly secure unified command and control service that provides an automatically updated, near real-

time view of the current location and status of mobile assets and resources layered with data from core business systems such as GIS, Customer, and Outage Management yielding unparalleled awareness of mobile operations. *AVaiL* does not displace existing systems – it unifies them into a single global command and control view of mobile operations.

The combined utility of *AVaiL's* command and control service with the industries most powerful mobile communications device, *OnComm*, enables the enterprise to track the location and status of virtually any mobile asset from toolboxes to backhoes; personnel to vehicles in near real-time.

AVaiL and *OnComm* deliver business solutions that far exceed mere dot-on-a-map automated vehicle location (AVL) systems. The mobile enterprise is being challenged as never before by aging infrastructures, catastrophic events, both natural and man-made, legislative/regulatory demands for reliability and safety, customer service improvements and rapid growth in many areas. All of these challenges require that they be able to react quickly and react where it counts: In the field!

AVaiL can normally be implemented in couple of days, delivering rapid mobile operations efficiency improvements and ROI.
